SLP-237

The SLP-237 is a 2U high 19" rack mount 220 Volt 30 amp single phase power distribution bar. This model has a NEWA L14-30 for a Main Inlet connector. There are two double 15 amp breakers and two single 20 Amp breakers located on the front panel. Both of the double 15 Amp breakers independently supply power to duplex twist-lock outlets located on the rear panel. Each of the remaining two 20 Amp single breakers are connected to one of the two (X & Y) phases of the main power inlet connector and distribute power to T-slot duplex U-ground receptacles located on the rear panel. The same two 20 Amp breakers supply power to one half of a split T-slot duplex U-ground convenience receptacle located on the front panel. This unit provides independent circuit protection for dual power supplies used on professional touring mixing consoles.
